About Me

Software Developer focused on building intelligent, high-performance systems.

Holds a B.S. in Computer Information Systems with deep expertise in Full-Stack development (JavaScript/React).

I bring the elite discipline, adaptability, and leadership of an Olympic athlete a to technical problem-solving environment.

Proactive learner driven to dive deep and deliver results.

Fluent in Hebrew, English, and Russian.

Skills

HTML, CSS, JavaScript, React, TypeScript, Next.js, Prisma, BullMQ, Socket.IO, D3.js, Redis, TailwindCSS, Docker, Node.js, Python, FastAPI, Linux, Uvicorn, Git, Jira, Vercel, SQL, PostgreSQL, GitHub Actions (CI/CD), GitHub Copilot, Agile, REST APIs, Shadcn, Data Structures & Algorithms.

Education

2021

B.S. Computer Science

University of South Carolina

(GPA 81, Student-Athlete, CSC Academic All-District Honoree)

2025

Project Experience

PulseBoard (Next.js, D3.js, Socket.IO, PostgreSQL, Redis) 2026

Code

- Built a real-time operational dashboard with live WebSocket streaming, interactive D3.js timeline (brush-zoom, annotations), and Figma-style multiplayer cursor - Dockerized with GitHub Actions CI.
- Designed a webhook ingestion engine normalizing GitHub/Sentry/uptime events into a unified schema, with an incident lifecycle state machine and configurable notification webhooks with HMAC signing.

FlowForge (Next.js, TypeScript, BullMQ, Redis, PostgreSQL) 2026

Code

- Built a visual AI pipeline builder where users drag, connect, and run multi-step AI workflows on a canvas - 10 node types (LLM, RAG, document processing, branching) with live per-node status updates streamed in real time.
- Implemented a secure Bring-Your-Own-Key model where user API keys are encrypted at rest and decrypted only at runtime, with full workflow execution history and support for both Anthropic and OpenAI - deployed live on Vercel + Railway.

DocPilot (Next.js, FastAPI, PostgreSQL, OpenAI) 2026

Code

- Built an AI-powered contract review platform that extracts key fields and flags risky clauses using GPT-4o with structured JSON output and Pydantic validation.
- Designed an async document processing pipeline with Celery and Redis, streaming real-time progress to the frontend via Server-Sent Events.
- Implemented side-by-side contract comparison with field-level diffing and multi-tenant team workspaces with JWT auth and role-based access

Auto-Procure (Next.js, FastAPI, CrewAI, GPT-4) 2026

Code

- Built an autonomous AI agent using CrewAI and GPT-4 that monitors real-time inventory levels in Supabase, detects shortages, and auto-drafts purchase orders grouped by vendor.
- Implemented a Human-in-the-Loop approval workflow where AI-generated orders require manager sign-off before execution, with optimistic UI updates on the dashboard

Other Experience

Professional Athlete – Swimming 2012 – Present

Israeli Olympic Team & University of South Carolina Gamecocks

- Tokyo 2020 Olympian & NCAA Division I Athlete. Balanced international competition with full-time academic commitments, demonstrating elite discipline and resilience.

Military Service – First Sergeant Israel | 2017 – 2021

Israel Defense Forces

- Achieved 'Elite Athlete' status while balancing international competition with military responsibilities, earning an honorable discharge with a proven record of leadership, reliability, and high-pressure performance.
